

WHY GO ELECTRIC?

Hot Water

Electric water heaters give you more control over water temperature and last longer than gas appliances!

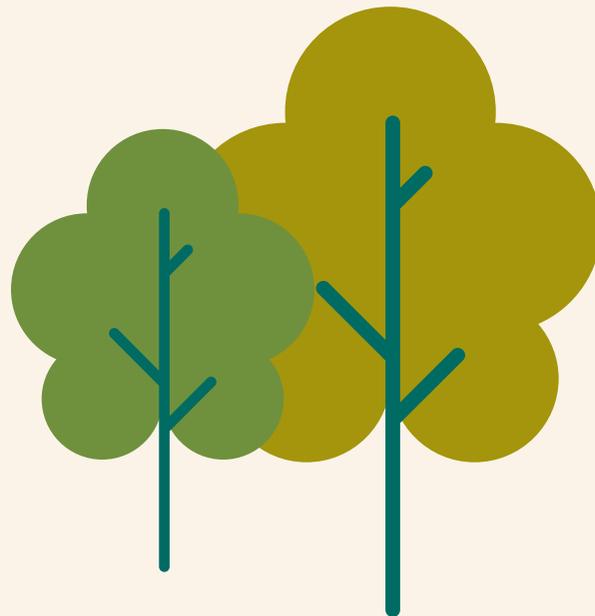

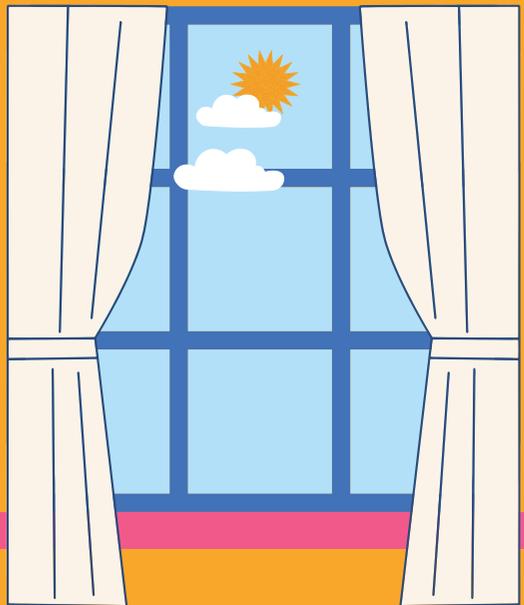

Healthy Homes

Homes that use fossil fuels like gas have poor indoor air quality, which can cause diseases like asthma.

A home that is all electric has better air quality and is more efficient.

Heating & Cooling

Air source heat pumps (or mini splits) are the most energy efficient way to heat your home. Heat pumps also provide air conditioning!

Cooking

Induction stoves use electricity and don't pollute your home the way that gas stoves do.

Cooking with gas creates harmful, invisible pollutants. Electric stoves are safer and more efficient!

\$\$\$

Many homes are already switching from gas to electric by using financial incentives and rebates, and you can too!

**When outdated
equipment needs to be
replaced, electric is the
way to go!**
